

San Diego Electroglide -- March 15 March 2008

Facing a weather forecast of possible rain, hail, and a wind velocities of 25-30 knots, WSW, ten gallant electrogliders showed up for the monthly run. The rain and hail did hold off until evening, but the wind didn't! Trust me, I know from experience that making dead-stick, spot landings, with 17-20 ounce sailplanes in high winds, even if the winds are down the runway, is a problem and a half! Keeping ships that light from running downwind and getting out of sight is another, yet.....these pilots conquered everything!!! Admittedly, there were only two spot landings in the bulls-eye, and then only "ten pointers", but congratulations to all the SEFSDers that showed their talents on this Saturday. You are to be congratulated!! We have remarkable weather here in San Diego, don't we? A week of great summer, and then back to the wild stuff of February!!!

The next Electroglide is April 19th, and hopefully we'll be back in the summer cycle -- warm weather, low winds, etc..... Come out and join us! Check the pages on the Club website for detailed info....and, yes, there will be an Electroglide during the MWE Spring Fling, Saturday, May 17th, 9:30. SEFSDers can fly for free! All you have to do is volunteer to help run the meet (and we should all do that anyway!!).
